Crook Motors - C17

NEED UPFITS?

WE ARE YOUR COMPLETE SOLUTIONS PROVIDER

Chassis built with upfitters in mind...

Perfect Upfit Integration

Both Freightliner and Western Star chassis offer clean frame rails, easily accessible body builder interfaces, and advanced electrical architecture (like the SmartPlex wiring system) that simplifies integration of cranes, compressors, welders, and PTO-driven equipment.

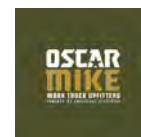

Superior Powertrain Flexibility

We offer proven Detroit and Cummins engine options, as well as Eaton and Allison transmission pairings, giving you flexibility to match horsepower, torque, and PTO requirements to the body's intended workload. For applications like crane trucks or mechanics bodies, this flexibility ensures efficient operation under heavy duty cycles.

Durability, Stability, and Safety

Trying to choose between class 6-8 trucks or something lighter? Heavy-duty trucks are engineered for hundreds of thousands of miles and years of vocational use. While initial costs are higher, the lower maintenance intervals, rebuildability, and uptime reliability result in lower total cost of ownership compared to cycling through lighter trucks more frequently. Heavier frames, larger brakes, and wider track widths contribute to better stability and braking performance under load—an essential safety advantage when handling cranes or working in uneven terrain.

Ask us about our upfitting partners!
